Data in Many Forms . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0Z8 (Telephone: 995-7406) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(992-4734)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Toll free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional references centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831
Ontario	1-800-268-1151
Manitoba	1-800-282-8006
Saskatchewan	1(112)800-667-3524
Alberta	1-800-222-6400
British Columbia (South and Central)	112-800-663-1551
Yukon and Northern B.C. (area served by NorthwesTel Inc.)	Zenith 0-8913
Northwest Territories (area served by NorthwesTel Inc.)	Zenith 2-2015

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0V7

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — $8.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — $60.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — $15 Canada, $18 Other Countries.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — $7.

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Acting Assistant Chief Statistician, Economic Statistics Field
R.E. Drover — Director, Business, Provincial and Municipal Relations Division
B.J. Lynch — Director General, Business Statistics
R. Platek — Director, Methodology Division
M. Podehl — Director, CANSIM Division
G.J. Brackstone — Director General, Methods Development Branch
A. Meguerditchian — Director, Financial Flows and Multinational Enterprises Division
L.O. Stone — Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou — Director; Industry Product Division
— Director General, System of National Accounts and Analysis Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada. R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Monthly or quarterly data may not add to totals due to rounding.

Observations

Report on Fixed Capital Stock in Canada 1936-83

Released by Statistics Canada

Statistics Canada has just released its historical publication on fixed assets, "Fixed Capital Flows and Stocks, Historical 1936 to 1983", Catalogue No. 13-568. The report contains, in both current and constant dollars, information about gross and net capital stocks (fixed reproducible assets), capital consumption allowances, gross and net capital formation (buildings, engineering structures and machinery and equipment). It also includes price indices for capital expenditure on plant and equipment by industry. The data covers the manufacturing, non-manufacturing, government-related and residential sectors.

"Fixed Capital Flows and Stocks, Historical 1936 to 1983" is now available through local Statistics Canada offices, or may be ordered from Publication Sales and Services, Statistics Canada, Ottawa, Ontario K1A 0V7. The cost of each copy is $16.70. Further information may be obtained from the National Wealth and Capital Stock Section of the Construction Division. (Phone: 613-995-8152).

Fertility Publication

Now available is *Demographic Aspects of Vital Statistics — Fertility* a non-catalogued publication that summarizes the discussions and recommendations of a workshop held under the sponsorship of Statistics Canada. The report, prepared by Professor Jean Veevers of the University of Victoria reflects the views and contributions of participants on various aspects of fertility determinants, their measurement and the consequences of emerging fertility trends in Canada.

For those interested in the vital statistical and other aspects of Canadian fertility and its past trends, current levels and future prospects, the report provides important, illuminating and informative reading. The report summarizes the available Canadian statistical information on fertility and the manifold aspects it encompasses. It enumerates the gaps in existing information and the Vital Statistics data system and recommends the ways of ameliorating these gaps.

Copies of the non-catalogued publication may be obtained for $6 from the Health Division or the Casual Sales Unit (613-992-3151), Statistics Canada. For further information, contact Professor J. Veevers, University of Victoria (604-721-1691), D. Nagnur (demographer) or J. Silins (chief), Vital Statistics and Disease Registries Section (613-995-9593), Health Division, Statistics Canada, Ottawa K1A 0T6.

Market Research Handbook 1983

The latest edition of a Statistics Canada popular reference source of Canadian marketing information is now available. This year's 803-page edition, complete with 278 tables and 45 charts, brings together an even wider range of updated statistical information, including a large selection of data derived from the 1981 Census.

Key data series in the publication include the consumption of Canadian goods and services, industry and consumer prices, employment, incomes and merchandising and services trades. For local market analysts, many of these series are available for Canada's 24 census metropolitan areas and 35 census agglomerations which represent more than 60% of Canada's population.

For anyone interested in assessing the dynamics of the market place, such as population growth, demographic trends, income distribution and changes in consumption patterns, the *Market Research Handbook*, 1983 is invaluable. Copies of the publication (catalogue 63-224) are available for $31.80 in Canada or $38.15 elsewhere.

---

[1] In general the term filtering refers to removing, or filtering out, movements of the data that repeat themselves with roughly the same frequency. [2] Composite Index of Housing Starts (units), Building Permits (dollars), and Mortgage Loan Approvals (number). [3] Deflated by the Consumer Price Index. [4] Toronto Stock Exchange (300 Stock Index excluding oil and gas component).

Section 2 · Population Statistics

14 1. Population by Province
14 2. Immigration to Canada, by Country of Last Permanent Residence
15 3. Immigration to Canada, by Province of (Intended) Destination
15 4. Immigration to Canada, by (Intended) Occupational Group
16 5. Births, by Province
16 6. Deaths, by Province
16 7. Marriages, by Province

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. [2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3] Includes logging, fishing, trapping and hunting. [4] Includes mechanical and construction. [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiancés and fiancées. [7] Does not include students entering Canada on students' visas. [8] Includes also retired persons, elderly dependents, and other unspecified persons.

Source: Quarterly Bulletin, Employment and Immigration Canada. Starting with 1978, preliminary data is obtained from unpublished tabulations.

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change

---

[1] This item is the adjustment to take account of the accrued earnings of farm operators arising out of the operations of the Canadian Wheat Board[2]. See also footnote 1, Table 1.4. Miscellaneous valuation adjustment. [3] For a breakdown between government and business, see Table 1.2.

For source see Table 1.9.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

---

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission.

---

[1] Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2] The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period.

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distribution code.

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

[1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste.

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3] Includes stove oil, kerosene. [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialities, coke, lubricating oil and grease, still gas and other products.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1977 and 1978 price indexes are subject to revision. [3] 1978 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] The major groups include additional components than the selected ones shown.

---

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery.

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data

[1] This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2] Seasonally adjusted data for Saskatchewan is not available.

Note: Components may not add to totals due to partial revisions.

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C.P.P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares.

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts.

Data in Many Forms . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0Z8 (Telephone: 995-7406) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(992-4734)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Toll free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional references centres.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory — $60.

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — $15 Canada, $18 Other Countries.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — $7.

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Acting Assistant Chief Statistician, Economic Statistics Field
R.E. Drover — Director, Business, Provincial and Municipal Relations Division
B.J. Lynch — Director General, Business Statistics
R. Platek — Director, Methodology Division
M. Podehl — Director, CANSIM Division
G.J. Brackstone — Director General, Methods Development Branch
A. Meguerditchian — Director, Financial Flows and Multinational Enterprises Division
L.O. Stone — Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou — Director, Industry Product Division
— Director General, System of National Accounts and Analysis Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada. R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

Financial Activity in Canada
Third Quarter 1983

During the third quarter domestic non-financial sectors borrowed $11,282 million on conventional credit markets, which represents 10.6% of Gross National Expenditure. Although a marked increase over the 5.6% recorded in the same period a year earlier, this level of borrowing activity is low relative to the 18% recorded in the third quarter of 1981. Compared to the second quarter, there was a reduction in demand for conventional credit market funds by most of these sectors; borrowing by all levels of government, characterized by increased use of short term instruments, remained at about 58% of this total. Private non-financial corporations increased share issues and increased the pace of reductions in bank loans, continuing trends begun toward the end of 1982. The personal sector's increases in mortgage borrowing and consumer credit moderated.

Economic activity continued its recovery for a third consecutive quarter, with output increasing by 3.2% nominally (2% in real terms), seasonally adjusted. Demand for consumer durables, especially for furniture and appliances remained strong. The latter were exempted from sales tax in Ontario until August and were influenced by increased purchases of housing in previous quarters. Residential investment was reduced; housing starts declined after the end of the Canadian Home Ownership Stimulation Program in May. Purchases of existing houses also fell during the third quarter. Business fixed capital formation remained weak. Corporate profits continued to increase, but remained below levels of early 1981.

At the beginning of the quarter, with a continuing current account surplus alleviating downward pressure on the U.S. dollar value of the Canadian dollar, short-term interest rates in Canada were kept at a level slightly below their U.S. counterparts. Concern over the rapid growth of the money supply leading to increased inflation, as well as anticipated government deficit financing requirements led to upward pressure on long term rates in the U.S. which increased by about 20 basis points in July and a further 40 by mid-August. Short-term rates in the U.S. followed with increases of 20-40 basis points in August which contributed to a strengthening of the U.S. dollar. The value of the Canadian dollar, which had started the quarter at $U.S. 81.4, fell to $U.S. 80.74.

During this period, long term rates in Canada kept pace with increases in the U.S. but short-term rates increased only slightly. When U.S. and Canadian rates started to decline during late August, the Bank of Canada sold Treasury bills, moderating short-term rate declines; by the end of the quarter the differential on interest rates between Canada and the U.S. was in Canada's favor. The Canadian dollar closed the quarter at $U.S. 81.09.

Interest rates increased by 7 to 20 basis points over the quarter; most of the steepening of the yield curve in the early part of the quarter disappeared by the end of the quarter.

The personal sector's mortgage borrowing of $2690 million, less than the $3382 million of the previous quarter, reflects the reduction in housing construction and resale activity. Increases in 5 year mortgage rates from 13% to 13.5% in late July and to 14% in late August may have been a factor, although short-term mortgage rates remained constant. The increase in consumer credit of $1159 million continues the increase of the previous quarter ($1578 million), after a period of a year and a half when consumer credit outstanding was reduced. Personal sector borrowing reflects recent high savings rates (15.1% of personal disposable income in 1982 and 12.6% so far in 1983) to the extent that accumulated assets are used to reduce debt or finance expenditure.

In the third quarter of 1983, the financing requirements of general government totalled $7915 million, or 7.5% of Gross National Expenditure. Net sales of federal government bonds amounted to $1346 million during the quarter; as usual, most of them were bought by insurance companies and pension plans ($677 million) and the Bank of Canada ($552 million). Persons and unincorporated business reduced their bond holdings (especially savings bonds) $-806 million.

On September 30, 1983, average yields on federal government marketable bonds with maturities of 1-3 years, 3-5 years, 5-10 years and over 10 years were 9.27%, 10.25%, 11.24% and 11.76% respectively. The return to a positive yield structure since the end of 1982 reflects the stabilization of interest rates, and a renewed interest in longer-term issues (in the third quarter of 1983, 25% of gross new issues had maturities in excess of 20 years, whereas there were none in excess of five years during the same period in 1982). Treasury bill issues have been rising steadily in recent quarters, totalling $3400 million, $4200 million and $4500 million in the first, second and third quarters of 1983. At the same time, yield differentials between Treasury bills and the marketable bond average climbed sharply, from 42 basis points in September 1982 to 135 points in September 1983, in favour of Treasury bills.

It is also interesting to note that in the last three quarters, banks and near-banks alone absorbed 46% of the federal government's net issues of Treasury bills and marketable bonds, compared with 7% during the same period in 1982. Net purchases of federal marketable bonds by the rest of the world plunged from $1829 million in the first three quarters of 1982 to $8 million in the same period in 1983. This trend can be related to the movement of interest rates in the United States, which remained generally high in comparison with Canadian rates.

Provincial governments raised $850 million in net new funds through bond issues, a rather small amount compared with recent quarters. However, they issued a relatively large amount ($778 million) of short-term paper, including almost $700 million in Treasury bills, mostly by Ontario. The principal buyers of provincial bonds were the rest of the world, social security funds and insurance companies and pension funds. Again, yield differentials seem to be the reason behind this decline in provincial bond issues. While average long-term yields on provincial bonds stabilized somewhat at the end of 1982, short-term paper yields continued their downward trend until later in 1983. Local governments continued to reduce borrowing (bank loans and other types of loans), but so far have not made up the difference with an increase in bond issues.

Non-financial government enterprises raised $789 million in net new bond issues, and short-term paper was up by $270 million. Most of this activity was by provincial enterprises. While net provincial bond issues ($880 million) are typical of this sector, the same cannot be said for short-term paper, which increased by a record $270 million as a result of an issue by a large hydro-electric company.

Public financial institutions were not very active on the financial markets during the quarter, with the exception of an issue of almost $500 million in short-term paper by the Export Development Corporation.

Non-financial private corporations' net borrowing requirements amounted to only $549 million in the third quarter. While profits and retained earnings continued to improve, gross fixed capital formation showed little strength. Inventory decumulation appeared to have largely run its course.

Of the financing activity that these companies undertook on conventional credit markets — raising $565 million in net new funds — much was directed towards restructuring balance sheets, lengthening debt maturities and improving debt to equity ratios.

Bank loans were paid down by $3100 million. The fourth consecutive quarterly reduction, this represents nearly a doubling of paydown over the last quarter and is a significant reversal of the increases running from late 1980 through the third quarter of 1982. In addition, other loans were reduced by $335 million — a fivefold reduction over the second quarter of 1983.

Net repayments can be attributed to improved profits and increased use of other forms of financing, in particular, equities and short-term paper.

Equities raised $1967 million, the highest amount since early 1981. This represents a 44% increase over the 2nd quarter and continues a four quarter period of growth, corresponding to improving share prices. The TSE 300 closed at 2499 at the end of September, up from 2459 in July. In early August, a small correction for excessive price earnings ratios occurred.

There were significant offerings by metal mines, utilities, retail department stores, as well as producers of mineral fuels, chemicals and paper and industries involved in gas distribution.

Much stock market activity was propelled by institutional investors whose bond portfolios had gained value because of the late summer fall in rates. In particular, trusteed pension plans increased holdings by $880 million ($2.8 million in the first three quarters of 1983); segregated funds and life insurance companies together increased holdings by $155 million and the rest of the world by $481 million.

A high percentage of these issues took the form of common shares — 81% in the third quarter. This was roughly double the percentage of the previous two years and served to reduce debt to equity ratios.

Short-term paper raised $836 million, up 41% from the 2nd quarter and provided a further shift from bank loans. This could be attributed to the 165 to 196 basis point differential between the chartered banks prime and the rates on thirty to ninety day short-term paper.

Net new bond issues raised $555 million — down 60% from the second quarter. This reduced growth could be attributed to a disinclination to incur long-term debt heightened by a mid-summer edging up of long-term rates.

On balance, large manufacturers reduced debt issues outstanding — although there were substantial issues in the distilling and brewing industries. Other major issues occurred in the service sector — in particular in respect of services to business management, pipelines and gas distribution.

Of the claims of associated enterprises, a substantial amount was related to the sale by non-residents of direct investment interests within the Canadian mining sector.

With the net paydowns of corporate loans, chartered banks purchased $1.6 billion in Treasury bills. Although this was down slightly from the 2nd quarter, it was the fifth consecutive quarter of substantial net purchases. These provide considerable cushioning against loan losses and correspond to a steadily increasing secondary reserve ratio. The latter, comprising excess primary reserves, day loans and Treasury bills, rose 135 percentage points from July to September.

Market Analysis Made Easier

Marketing specialists are now expected to make sound decisions in an increasingly complex market environment. An invaluable tool of their trade is the *Market Research Handbook,* the most comprehensive array of Canadian marketing information available in a single volume, consisting of 803 pages, 278 tables, and 45 charts.

The new 1983 edition of this popular reference source is now available, bringing together an even wider range of updated statistical information, including population and housing data from the 1981 Census.

Issued by Statistics Canada on a yearly basis, and one of its best sellers, this *Handbook* has long been used for analysis of markets of all sizes, ranging from local through regional to national in scope.

Information in the *Handbook* can help you evaluate your own market position, identify consumer markets, forecast sales levels, plan advertising campaigns, etc.

Whether you are a business person or a market analyst in a large corporation the *Market Research Handbook, 1983* contains a wealth of information at your fingertips.

Key data series include the consumption of Canadian goods and services, industry and consumer prices, employment, incomes and merchandising and services trades. For local market analysts, many of these series, as well as Census of population and household data, are available for 59 major urban markets, representing more than 60 per cent of Canada's population. Projections of population, family and household growth, as well as international comparisons, are also included. Significant developments in the market place are highlighted through the use of graphics for easy identification.

You can purchase your copy of the *Market Research Handbook, 1983,* Catalogue No. 63-224/01322 for $31.80 a copy in Canada or $38.15 elsewhere. Or you can become an annual subscriber to the *Market Research Handbook,* beginning with the 1983 edition. This will entitle you to receive advance notice of the release of upcoming editions. Please indicate your choice. To order, send a cheque or money order payable to the Receiver General for Canada to Publication Sales and Services, Statistics Canada, Ottawa, Ontario K1A 0T6.

For further information, contact Maurice Massaad (613) 995-4198, Merchandising and Services Division, Statistics Canada, Ottawa.

A Note on the Role of Leading Indicators in the Statistical System

Policy-makers and decision-makers in both the government and private sectors are making increased and more sophisticated uses of quarterly national accounts and of other macro-economic frameworks in order to evaluate the current performance of the economy and to detect its underlying trends. However, by the time users have access to the elaborate frameworks which allow them to analyze the economy in a relatively disciplined fashion, events with consequences for the near and medium term future may have already taken place. The first quantitative manifestation of current economic developments often occurs in a group of indicators that lead cyclical movements in the economy and that can be assembled rapidly as events unfold. Consequently it is not surprising that "leading indicators" have long played a role in assessing current economic conditions. In the last decade the increased severity of recessions worldwide has disabused most analysts of the notion that the business cycle is dead and has rekindled interest in the leading indicator approach to economic analysis. Since the early 1970s the number of organizations, both in Canada and elsewhere, that have developed indicator systems to monitor economic developments is quite impressive. All of this activity has stimulated inquiries into the nature of the work being carried out and into possible directions of evolution of indicator systems.

These inquiries have led Statistics Canada to develop a set of theoretical guidelines that are useful in constructing, evaluating, or in guiding the evolution of leading indicator systems. Also, technical advances in data smoothing have been utilized so that the number of false signals emitted by the leading index has been minimized while preserving the maximum amount of lead time. A paper on these topics was published in the May 1982 issue of *Current Economic Analysis* (catalogue number 13-004E). Within the limits of this note we can only be suggestive and indicate that a leading indicator system should be structured as much as possible like the framework (e.g. the quarterly national accounts) that it is intended to complement, and it must contain a broad enough range of component indicators to enable the system to warn of cyclical changes that may be generated by any of a large variety of causal mechanisms. Although the current version of Statistics Canada's leading indicator system does not incorporate all the implications of the theoretical guidelines, along with the guidelines, it constitutes a useful addition to the indicator systems in Canada, and will become increasingly more so as the system evolves in accordance with the theoretical principles underlying its development.

---

[1] In general the term filtering refers to removing, or filtering out, movements of the data that repeat themselves with roughly the same frequency. [2] Composite Index of Housing Starts (units), Building Permits (dollars), and Mortgage Loan Approvals (number). [3] Deflated by the Consumer Price Index. [4] Toronto Stock Exchange (300 Stock Index excluding oil and gas component).

Section 2 · Population Statistics

14 1. Population by Province
14 2. Immigration to Canada, by Country of Last Permanent Residence
15 3. Immigration to Canada, by Province of (Intended) Destination
15 4. Immigration to Canada, by (Intended) Occupational Group
16 5. Births, by Province
16 6. Deaths, by Province
16 7. Marriages, by Province

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. [2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3] Includes logging, fishing, trapping and hunting. [4] Includes mechanical and construction. [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiancés and fiancées. [7] Does not include students entering Canada on students' visas. [8] Includes also retired persons, elderly dependents, and other unspecified persons.

Section 3 · System of National Accounts

1. Income and Expenditure Accounts

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
27 2.2 Gross Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1—Income and expenditure accounts

Table 1.1: National income and gross national product (millions of dollars)

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation)

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-00

Source: The Labour Force (71-001), monthly.

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission.

[1] Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2] The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

---

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included

Note: All series are subject to revision each year when more recent Census of Manufactures data become available

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: Manufacturing shipments[1] by industry based on the 1970 standard industrial classification (million dollars)

[1] Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

	Inventories owned							Inventories held: raw materials						
	Consumer goods							Consumer goods						
Annual average and month	Non-durable	Durable	Machinery and equip-ment	Con-struction materials and com-ponents	Other inter-mediate goods & supplies	Export-based industries	Supple-mentary classifi-cation: automotive products	Non-durable	Durable	Machinery and equip-ment	Con-struction materials and com-ponents	Other inter-mediate goods and supplies	Export based indus-tries	Supple-mentary classifi-cation automotive products

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period.

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distribution code.

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision

[1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste.

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3] Includes stove oil, kerosene. [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialities, coke, lubricating oil and grease, still gas and other products

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly

Source: Housing Starts and Completions (64-002), Statistics Canada.

Note: Components may not add to totals due to rounding differences.

[1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1977 and 1978 price indexes are subject to revision. [3] 1978 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] The major groups include additional components than the selected ones shown.

---

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

Table 4: Merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

---

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery.

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data

[1] This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2] Seasonally adjusted data for Saskatchewan is not available

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts.

Data in Many Forms . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 995-7406) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(992-4734)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Toll free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional references centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831
Ontario	1-800-268-1151
Manitoba	1-800-282-8006
Saskatchewan	1(112)800-667-3524
Alberta	1-800-222-6400
British Columbia (South and Central)	112-800-663-1551
Yukon and Northern B.C. (area served by NorthwesTel Inc.)	Zenith 0-8913
Northwest Territories (area served by NorthwesTel Inc.)	Zenith 2-2015

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory — $60.

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — $15 Canada, $18 Other Countries.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — $7.

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Acting Assistant Chief Statistician, Economic Statistics Field
R.E. Drover — Director, Business, Provincial and Municipal Relations Division
B.J. Lynch — Director General, Business Statistics
R. Platek — Director, Methodology Division
M. Podehl — Director, CANSIM Division
G.J. Brackstone — Director General, Methods Development Branch
A. Meguerditchian — Director, Financial Flows and Multinational Enterprises Division
L.O. Stone — Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou — Director, Industry Product Division
— Director General, System of National Accounts and Analysis Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada. R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 5 — Table 3: Construction price statistics

Five series have been deleted in Residential building construction input price index. One new quarterly series has been added with this issue, total machinery and equipment price index.

The official time base for the construction union wage rate index has been converted from 1971 = 100 to 1981 = 100.

Monthly or quarterly data may not add to totals due to rounding.

Gross National Product

Fourth Quarter and Preliminary Annual 1983 Advance Information

Gross National Product rose 1.0% in the fourth quarter of 1983 to a level of $400.6 billion, seasonally adjusted at annual rates. Combined with virtually no change in the level of overall prices, real GNP rose 0.9%. Although this represented a slowing from the average rates of increase of 1.9% recorded in the first three quarters, the recovery phase of the business cycle was virtually completed as real GNP reached 99.7% of its peak level of the second quarter of 1981.

For the year as a whole, Gross National Product rose 9.0% to a level of $388.7 billion. After allowing for an increase of 5.8% in the overall implicit deflator, real GNP rose 3.0% in the year. This followed a decline of 4.4% in real activity in 1982.

The recovery of economic activity in 1983 was broadly based with major contributions from a sharply lower rate of inventory decumulation, a 3.1% increase in real personal expenditure, a 9.0% recovery in the volume of merchandise exports, and a 27.6% increase in residential construction activity. Continued weakness in business investment in plant and equipment was the major restraining factor. A sharp reduction in inflation was evident as the overall implicit deflator rose 5.8% compared to 10.1% in 1982.

The swing in non-farm business inventories of $3.3 billion (which was the result of a decline in stocks of $3.4 billion in 1982 and virtually no change in 1983) was the equivalent of 83% of the increase in real GNP. The year was characterized by continued declines in stocks in the first two quarters and a resumption of inventory investment in the latter half of the year. Declining short term interest costs associated with holding inventories was a major factor in the improvement of the profitability of firms in the year. The moderate recovery of stocks in the latter half of the year despite the more rapid improvement in final demand, probably indicated an attempt on the part of firms to keep associated interest costs low.

The recovery of personal expenditures was concentrated in the interest-rate sensitive components as purchases of durables rose 10.7% in volume (most notably passenger cars, furniture and appliances) relative to the 1.6% increase in other expenditures. The underlying weakness in most categories of consumer spending is likely a result of weak income growth. Personal disposable income grew only 5.1% in 1983 in nominal terms. This was the second consecutive year in which disposable income did not grow as fast as the implicit deflator for personal expenditure, leaving real personal disposable income slightly below 1981 levels.

Residential construction, the other major interest-rate sensitive component of the economy, recovered sharply in the first half of the year, rising 38% in volume from the fourth quarter of 1982 to the second quarter of 1983. This corresponded to a drop in the 5 year conventional mortgage rate from 15.0% to 13.1% and the impact of the Canadian Home Ownership Stimulation Program. Activity declined in the latter half of the year following the end of the program in May and the leveling off of mortgage rates.

Strength in export demand (up 6.6% in current dollars) corresponded to a recovery of economic activity in the United States, which proceeded with a similar momentum to that in Canada. Import demand also picked up in 1983 (up 7.6% in current dollars) in conjunction with improved demand in the Canadian economy. This left the nominal merchandise trade surplus down only $297 million from the record $18.3 billion surplus recorded in 1982, and total net exports in a surplus for the second consecutive year.

Business investment in plant and equipment continued to decline in 1983, down 12.2% in real terms compared to a drop of 11.2% in 1982. Despite the sharp improvement in profits in the year, (corporate profits before taxes rose 53% in 1983) corporate balance sheets had not fully recovered as debt to equity ratios remained high and liquidity ratios low. Capacity utilization rates in manufacturing increased with the recovery in activity but by the third quarter still remained 10 percentage points below pre-recession levels. Preliminary results of the Department of Regional and Industrial Expansion survey of investment intentions of large firms indicate that the weakness may continue into 1984.

Labour income continued to slow despite the upturn in employment for the year, rising 5.6% in 1983 following a 7.4% increase in 1982. Paid-worker employment rose 0.5%, following a 3.6% decline in the previous year. The implied sharp slowdown in average earnings in 1983 was due to a combination of lower wage increases in the year and a shift in the composition of employment to a higher proportion of part-time workers.

This slowdown in labour income growth was a major source of the weakness in personal income in the year. Consistent with the high levels of spending on durable goods, the flow of savings was reduced such that the personal savings fell from 15.1% of personal disposable income in 1982 to 12.9% in 1983.

The total government sector deficit rose to a level of $22.7 billion on a national accounts basis, an increase of $3.8 billion in 1983 following an increase of $15.1 billion recorded in 1982. Total expenditures slowed to an increase of 10.0% following an increase of 16.4% in 1982, largely due to slower growth in wages and salaries, transfer payments and interest on the public debt. Government revenues rose at a slightly faster rate than in 1982, up 8.7%, largely due to the increase in corporate tax liabilities.

Fourth Quarter Detail

The major source of growth in real activity in the fourth quarter was the strong performance of merchandise exports, up 8.5% in volume following an increase of 1.2% in the third quarter. This largely reflected buoyant final domestic demand in the United States, which has risen on average 1.3% per quarter throughout the year of 1983. The slowing of the recovery in Canada in the fourth quarter was largely attributable to weak final domestic demand. Residential construction and business investment in plant and equipment declined at accelerated rates in the fourth quarter, and the recovery of consumer expenditure slowed. Concurrently with the slowing of final domestic demand, paid-worker employment decelerated to an increase of 0.5% from 1.2% in the third quarter. The pace of inventory investment continued at moderate rates in the quarter despite the sharp recovery in the volume of sales of goods since the fourth quarter of 1982. The acceleration of export demand was widespread across commodity groups with the largest increase recorded in exports of motor vehicle products. Import demand slowed in the fourth quarter so that the nominal merchandise trade balance rose $2.4 billion to a level of $18.4 billion at annual rates. With virtually no change in the non-merchandise deficit, net exports recorded a $0.4 billion surplus, after a $1.7 billion deficit in the third quarter.

The volume of personal expenditures rose 0.8% in the fourth quarter, a slight deceleration from the 1.3% increase recorded in the third. Demand for automobiles was the major source of strength and purchases of durable goods have surpassed pre-recession levels. When automobiles are excluded, personal expenditure on goods was unchanged in the fourth quarter (compared to an increase of 1.0% when they are included), indicating that Christmas spending was relatively sluggish in 1983. Personal expenditure on services continued to grow at moderate rates, up 0.6% in the quarter.

Business fixed investment fell 4.3% in volume in the fourth quarter following a decline of 1.5% in the third. Residential investment dropped 11.9% as new housing construction activity continued to decline following the rapid pace of the recovery recorded in the first half of 1983. The drop in construction was reinforced by declines in the volume of alterations and real estate commissions. Renewed weakness was recorded for business investment in plant and equipment in the fourth quarter. Investment in machinery and equipment fell slightly in volume following two quarters of increases. This largely reflected a slowing demand for industrial machinery and equipment as expenditures on commercial vehicles remained strong. Non-residential construction continued to decline in the fourth quarter, down a further 3.4% in real terms.

Inventory investment continued at moderate rates in the fourth quarter with accumulations recorded for virtually all industry groups. As mentioned above, the rate of inventory investment has been very sluggish to date, relative to the recovery in demand. This slow rate of inventory investment may continue into early 1984 given the most recent business conditions survey where the majority of manufacturers judged inventory levels to be ''about right'', despite the low stock-to-sales ratio.

The overall implicit deflator was virtually unchanged in the fourth quarter. Much of the deceleration, however, was due to weight shifts within inventories rather than price changes. The implicit deflator for GNE excluding inventories rose 0.6% relative to the 0.7% increase recorded in the third quarter. This is more reflective of the stabilization evident in other aggregate measures of inflation in the fourth quarter.

Labour income growth decelerated in tandem with employment growth in the fourth quarter, rising only 0.9%, following an increase of 2.3% in the previous quarter. The slowing was attributable to declines in the forestry, mining and construction industries due to lower employment. The personal savings rate dropped to 12.3% in the fourth quarter, a rate more reflective of the savings flows for the year. The savings rate was irregularly high in the third quarter due to the delay of personal income tax refunds this year.

The growth of corporate profits also slowed in the fourth quarter rising only 4.2% relative to average increases of 14.5% in the previous four quarters. While the increases in the previous quarters had been largely due to a combination of rising sales and declining interest costs, the increase in the fourth quarter was mainly attributable to higher sales. Lower profit increases were most evident in retail and wholesale trade industries, while the largest increase was recorded in the automobile industry.

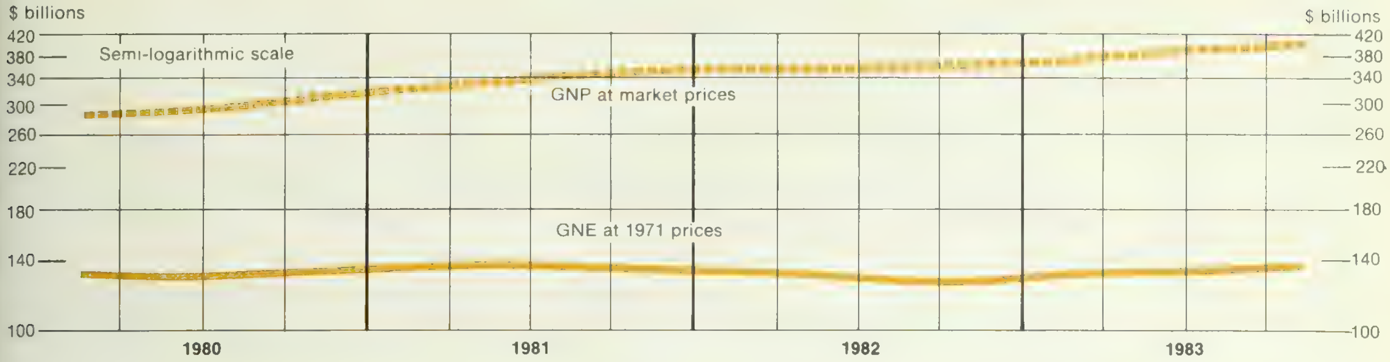
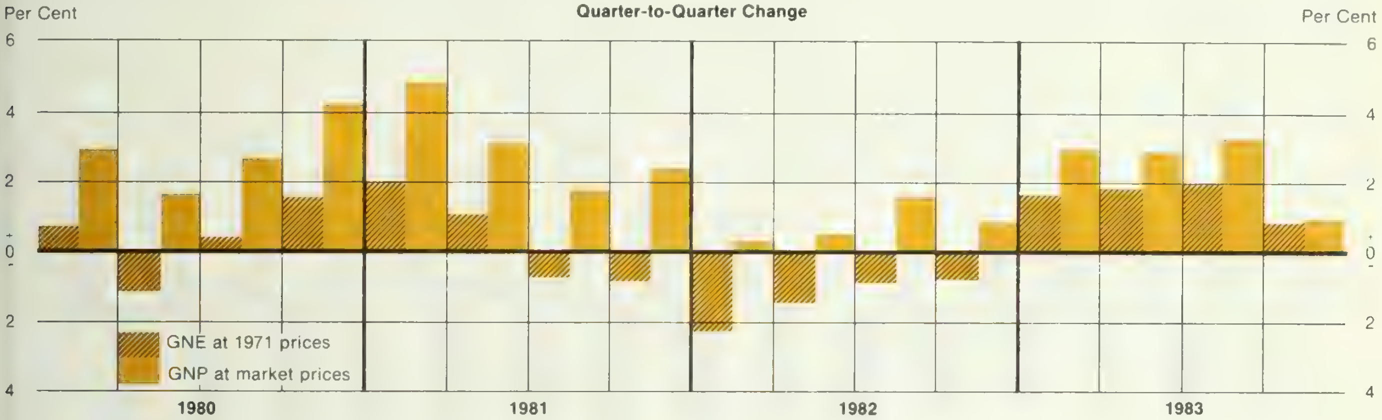
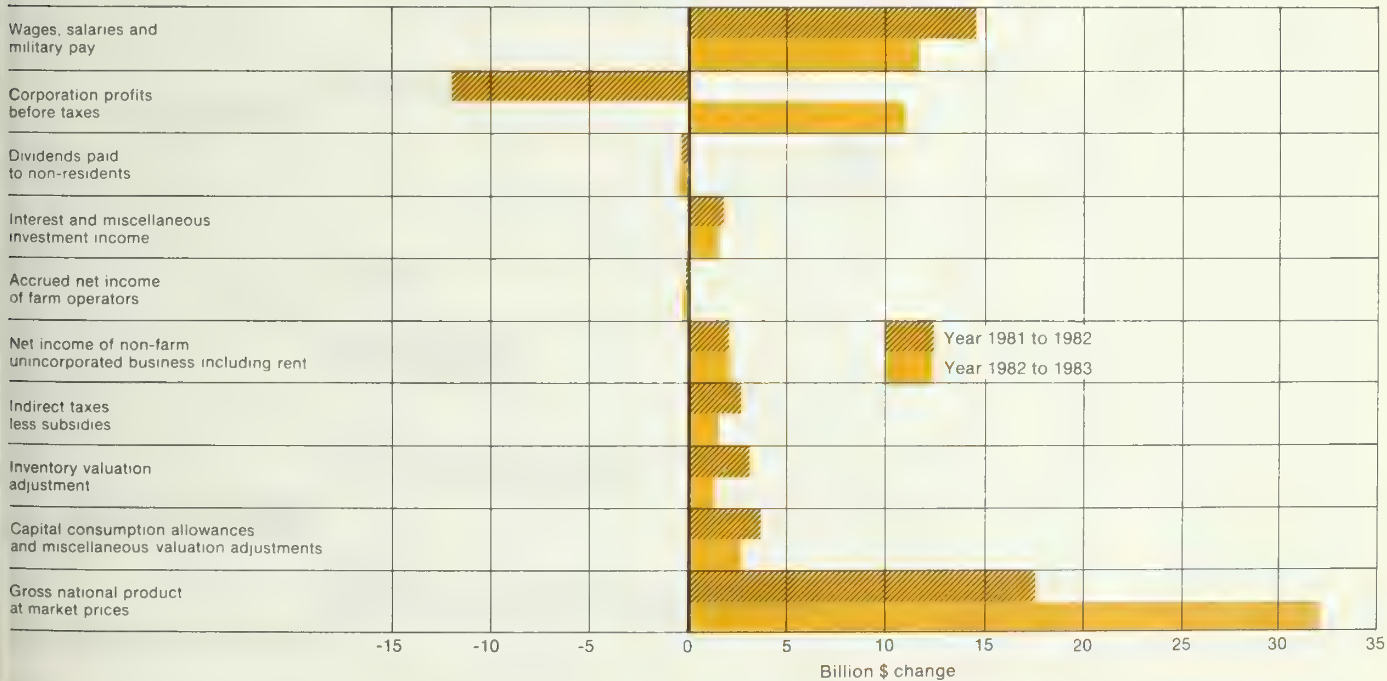
In 1983 Gross National Product at market prices rose 9.0% to a level of $388.7 billion. After allowing for price increases real GNP rose 3.0% following a decline of 4.4% in 1982.



Gross National Product at market prices, seasonally adjusted at annual rates rose to a level of $400.6 billion in the fourth quarter of 1983, an increase of 1.0%. In real terms the growth was 0.9%.

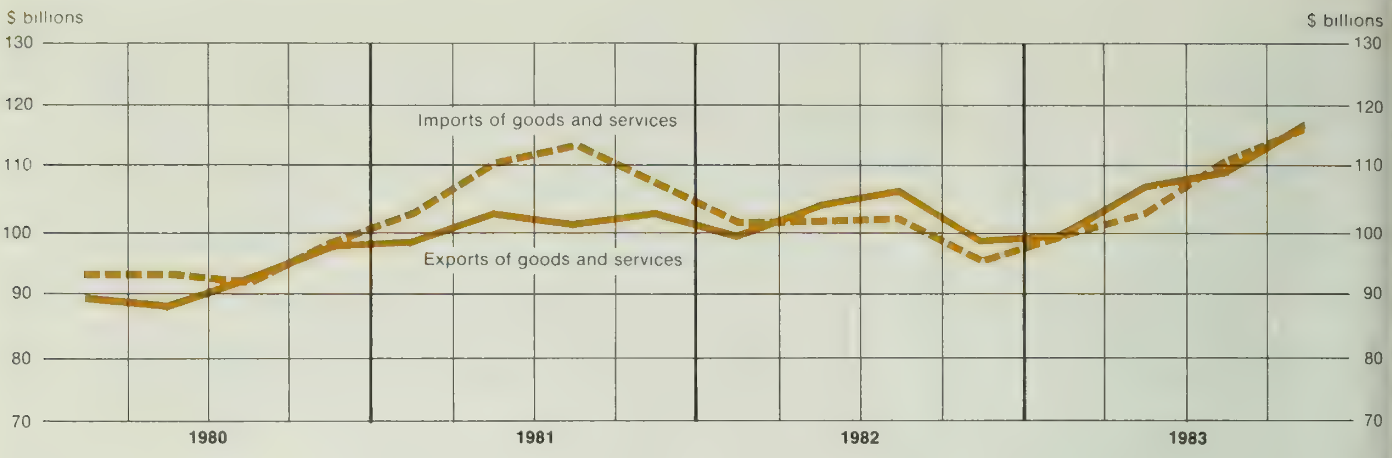


Wages, salaries and supplementary labour income and military pay and allowances increased 5.6% in 1983 compared to a 7.5% growth in 1982. Corporation profits before taxes showed a strong 52.8% increase following a decline of 36.1% in the previous year, while interest and miscellaneous investment income had increases of 6.7% and 5.2% in 1982 and 1983.

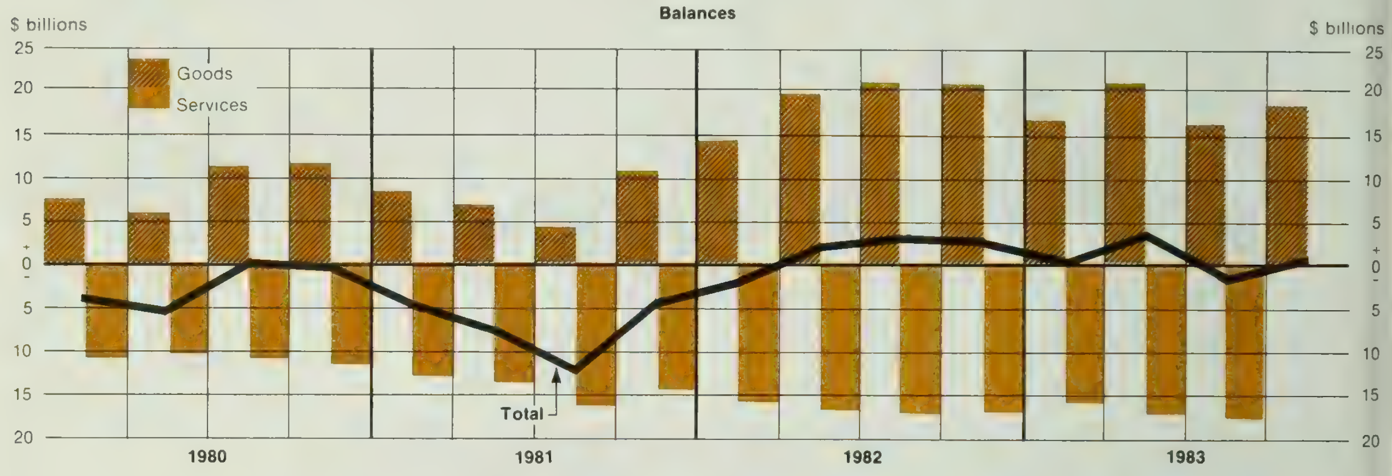


Note: All quarterly data adjusted for seasonal variation and at annual rates

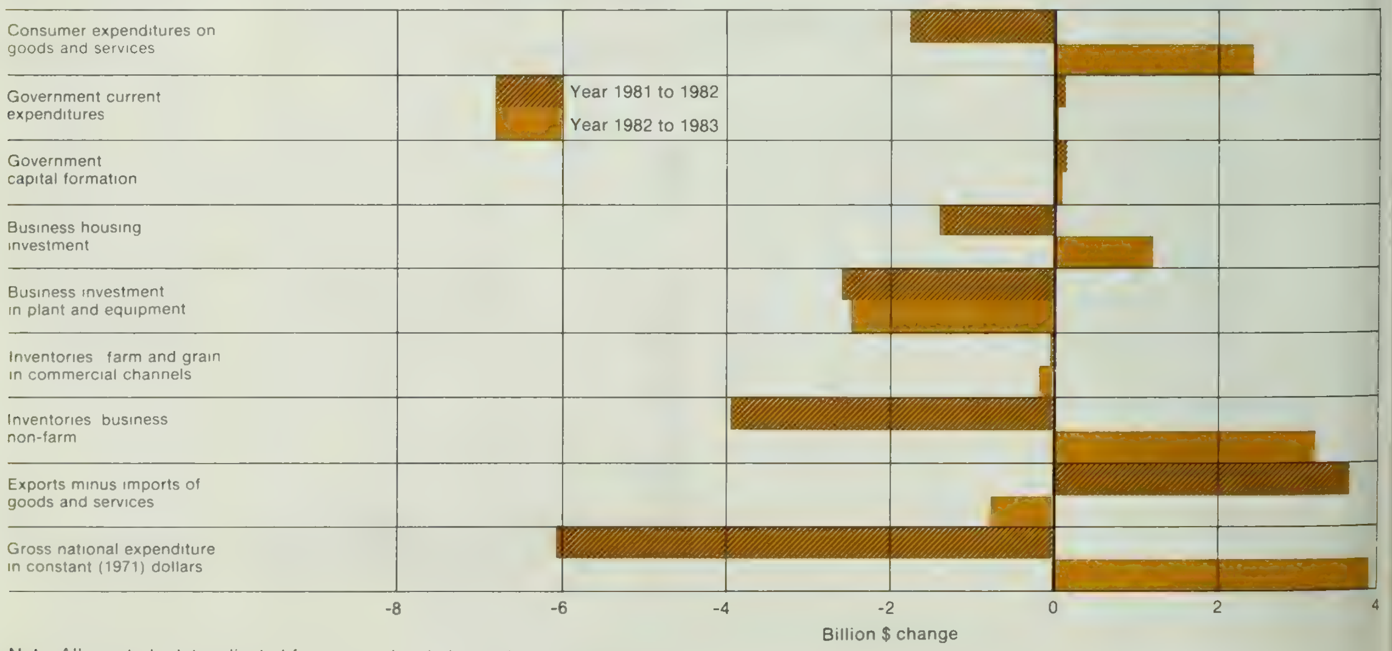
In 1983 exports and imports of goods and services rose 6.6% and 7.6% respectively resulting in a drop in the surplus on goods and services from $1.6 billion in 1982 to $0.7 billion in 1983.



In the fourth quarter of 1983, exports of goods and services advanced 7.6% while imports rose 5.6%. The merchandise trade surplus increased by $2.4 billion to a level of $18.4 billion.



A sharply lower rate of inventory decumulation, a 3.1% increase in real personal expenditure, a 9.0% recovery in the volume of merchandise exports and a 27.6% increase in residential construction activity were the major contributors to the recovery of economic activity in 1983.



Note: All quarterly data adjusted for seasonal variation and at annual rates

---

[1] In general the term filtering refers to removing, or filtering out, movements of the data that repeat themselves with roughly the same frequency. [2] Composite Index of Housing Starts (units), Building Permits (dollars), and Mortgage Loan Approvals (number). [3] Deflated by the Consumer Price Index. [4] Toronto Stock Exchange (300 Stock Index excluding oil and gas component).

Section 2 · Population Statistics

14 1. Population by Province
14 2. Immigration to Canada, by Country of Last Permanent Residence
15 3. Immigration to Canada, by Province of (Intended) Destination
15 4. Immigration to Canada, by (Intended) Occupational Group
16 5. Births, by Province
16 6. Deaths, by Province
16 7. Marriages, by Province

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. [2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3] Includes logging, fishing, trapping and hunting. [4] Includes mechanical and construction. [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiancés and fiancées. [7] Does not include students entering Canada on students' visas. [8] Includes also retired persons, elderly dependents, and other unspecified persons

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation)

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

Table 4: Selected series* by sex and main age group (thousands of persons)

---

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission

---

[1] Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2] The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately Should strikes occur in these industries, the time lost also will be shown in the total. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

[1] Total inventories owned by manufacturers including warehouse stocks

Note: All series are subject to revision each year when more recent Census of Manufactures data become available

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 4: Estimated value of shipments and unfilled orders in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

Annual average and month	Shipments[1]							Unfilled orders at end of month						
	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods & supplies	Export-based industries	Supplementary classification: automotive products	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods and supplies	Export-based industries	Supplementary classification: automotive products

[1] Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distribution code.

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric.

[1] Less imports. [2] Total net generation less net exports.

Note: Monthly data includes all producers of electric energy who generate 20 GW.h or more per year. Annual data represent full coverage of generating facilities that may include revisions not available on a monthly basis.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

[1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste.

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used [3] Includes stove oil, kerosene [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialities, coke, lubricating oil and grease, still gas and other products

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly

Note: Components may not add to totals due to rounding differences.

[1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1977 and 1978 price indexes are subject to revision. [3] 1978 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] The major groups include additional components than the selected ones shown.

---

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

Table 4: Merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery.

---

[1] Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Commencing January 1973, only 6 major railways (accounting for 95 per cent or more of the total operating revenues) are shown

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] These series reflect the combination of two CANSIM series

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data

[1] This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2] Seasonally adjusted data for Saskatchewan is not available

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts

Statistics Canada Statistique Canada

Data in Many Forms . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 995-7406) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(992-4734)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Toll free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional references centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory — $60.

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — $15 Canada, $18 Other Countries.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — $7.

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Acting Assistant Chief Statistician, Economic Statistics Field
R.E. Drover — Director, Business, Provincial and Municipal Relations Division
B.J. Lynch — Director General, Business Statistics
R. Platek — Director, Methodology Division
M. Podehl — Director, CANSIM Division
G.J. Brackstone — Director General, Methods Development Branch
A. Meguerditchian — Director, Financial Flows and Multinational Enterprises Division
L.O. Stone — Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou — Director, Industry Product Division
— Director General, System of National Accounts and Analysis Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada. R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

Section 5 — Table 3: Construction price indexes

The official time base for the new housing price indexes have been converted from 1976=100 to 1981=100. Please note that some of the metropolitan areas have been replaced in the new housing price indexes.

Section 11 — Table 1 and 2: Merchandise Exports and Imports, major countries and areas

Effective with the April issue, Tables 1 and 2 have been altered to show merchandise trade for the same countries and geographical areas.

Observations

Canada's Young Family Home-Owners

This is another in the Census Content Series of popular publications, based on 1981 Census data. *Canada's Young Family Home-owners* has six full-page charts, three tables, and a complementary text which is straightforward and non-technical.

The family has always been the prime consuming unit of non-rental housing. Young families (in which the wife or lone parent is 35 years of age or younger) are particularly motivated towards owning a house in which to raise children or to invest in the future — much as their parents did before them.

The rate of home ownership is inversely related to the size of a community. Only half of the 75% of young families living in urban areas own their own homes, while 90% of all young families who live in rural farm areas are home-owners.

Although single houses were the dwelling type chosen by four out of five young families purchasing a home, the percentage owning such dwellings actually declined between 1971 and 1981. Nevertheless, most of Canada's young family home-owners lived in recently built, well-maintained houses, without overcrowding.

While most young family home-owners do not spend more than 30% of their family income on shelter costs, this is not the case for female lone-parent families who owned their own homes.

The forty percent of young families who were renting in 1981 are potential home-owners; their decision to purchase could have a positive impact on the housing industry in the future.

This study discusses many aspects of the subject from the quality of shelter, and regional differences — to shelter costs and average family incomes. *Canada's Young Family Home-owners* will be of interest to every Canadian who has a family, and will be particularly useful to students and professionals interested in the social and demographic issues of the eighties.

You can purchase your copy of *Canada's Young Family Home-owners* (Cat. No. 99-939, $5.50 in Canada, $6.60 elsewhere), by sending a cheque or money order payable to the Receiver General for Canada, to Publication Sales and Services, Statistics Canada, Ottawa, Ontario K1A 0T6.

The Elderly In Canada

Population aging is a major social issue. Not only do the elderly have special needs which have an impact on the health, housing, travel, investment and food industries, but as a growing minority, their political influence as voters is increasing significantly. *The Elderly In Canada* examines the implications of population aging, using data from the 1981 Census.

In 1981, nearly 10 in every 100 Canadians were aged 65 or older. While the number of elderly people increased 36% in the last decade, the number of children under 15 decreased 14% so that by 1981 the population consisted of 431 elderly persons for every 1,000 children, as opposed to 273 per 1,000 in 1971. This has immediate implications for market researchers and planners who must gear products and services towards a progressively increasing market of older persons.

The process of population aging has occurred in all developed countries of the world subject to a low birth rate. The century-long decline in our birth rate (with the exception of the baby boom years 1946 - 1966) to a low of 16 per 1,000 population in 1971/1981 has been the primary cause of population aging in Canada.

Life expectancy has also increased. For example, in 1931, life expectancy at birth for men was 59.6 years; fifty years later it was 71.5 years. Women increased their life expectancy to an even greater extent, from 61.8 to 78.7 years; this partly accounts for an imbalance between the sexes where women over 85 years of age outnumber men two to one. Male losses during the Second World War also accentuate female predominance among the aged.

Contrary to popular belief, over 90% of the elderly people live in private households — not in institutions. Women tend to outlive their partners and are less likely to remarry; consequently, as many as 32% of the elderly women live alone, compared with only 13% of the elderly men. By the same token, 53% of the elderly men live in a private household with only their spouse, compared with 30% of the elderly women.

The Elderly In Canada focuses on some of the major demographic and socio-economic characteristics of Canada's senior citizens, including place of residence, education, income, ethnic composition and place of birth data. It concludes by linking population projections for the elderly to the present concerns of social planners who must design the welfare systems of the next century. This publication is part of the Census Content Series of non-technical publications featuring many charts and tables.

You can purchase your copy of *The Elderly In Canada* (Cat. No. 99-932, $5.50 in Canada, $6.60 elsewhere) by sending a cheque or money order payable to the Receiver General for Canada, to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

---

[1] In general the term filtering refers to removing, or filtering out, movements of the data that repeat themselves with roughly the same frequency. [2] Composite Index of Housing Starts (units), Building Permits (dollars), and Mortgage Loan Approvals (number). [3] Deflated by the Consumer Price Index. [4] Toronto Stock Exchange (300 Stock Index excluding oil and gas component)

Section 2 · Population Statistics

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. [2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3] Includes logging, fishing, trapping and hunting. [4] Includes mechanical and construction. [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiancés and fiancées. [7] Does not include students entering Canada on students' visas. [8] Includes also retired persons, elderly dependents, and other unspecified persons.

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001

Source: The Labour Force (71-001), monthly.

---

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission

[1] Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month

[2] The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification.

[3] The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc.

[4] The total includes all work stoppages The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately Should strikes occur in these industries, the time lost also will be shown in the total.

[5] Includes publishing and allied industries.

[6] Includes storage and communication industries

Source: Research Bulletin, Labour Canada.

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

[1] Estimates of manufacturers' shipments are based on a monthly survey of a sample of manufacturing establishments benchmarked to the annual Census of Manufactures.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 3: Manufacturing inventories[1] by industry based on the 1970 standard industrial classification (million dollars)

[1] Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

	Inventories owned							Inventories held: raw materials						
	Consumer goods							Consumer goods						
Annual average and month	Non-durable	Durable	Machinery and equipment	Construction materials and components	Other intermediate goods & supplies	Export-based industries	Supplementary classification. automotive products	Non-durable	Durable	Machinery and equipment	Construction materials and components	Other intermediate goods and supplies	Export based industries	Supplementary classification. automotive products

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distribution code.

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric.

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3] Includes stove oil, kerosene. [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.
Source: Housing Starts and Completions (64-002), Statistics Canada.

Note: Components may not add to totals due to rounding differences.

[1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1977 and 1978 price indexes are subject to revision. [3] 1978 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] The major groups include additional components than the selected ones shown.

---

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

Table 4: Merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

---

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery.

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] These series reflect the combination of two CANSIM series

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

[1] This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2] Seasonally adjusted data for Saskatchewan is not available

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts.
